# Appendix V

# Model Outputs (HHRA)

# (to be provided electronically once final)

# APPENDIX V-Human Health Risk Assessment Outputs

Appendix V Ito the HHERA contains all of the Goliath Gold Project HHERA Model Outputs for the Human Health Risk Assessment (HHRA). Appendix V is organized by the model outputs related to the calculated exposure and potential risk for the non-cancer endpoint (i.e. Hazard Quotient), and the calculated exposure and potential risk for the carcinogenic endpoint (i.e. Incremental Lifetime Cancer Risk).

To calculate all possible operable exposure pathway and receptor combinations for all possible assessment scenarios and Project phases, the Goliath Gold Project HHERA Model was run 81 times for the non-cancer endpoint, and 54 times for the carcinogenic endpoint. The following two tables describe the index for the Non-Cancer Model and the Cancer Model, respectively.

**Human Health Risk Assessment: Index of Non-Cancer Model Outputs**

| | Model_1 | Model_2 | Model_3 | Model_4 | Model_5 | Model_6 | Model_7 | Model_8 | Model_9 | Model_10 | Model_11 | Model_12 | Model_13 | Model_14 | Model_15 | Model_16 | Model_17 | Model_18 | Model_19 | Model_20 | Model_21 | Model_22 | Model_23 | Model_24 | Model_25 | Model_26 | Model_27 | Model_28 | Model_29 | Model_30 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
