Subject: Please approve this!

Dear Sir/Madam

Please approve this project, and please do it quickly. Here are important reasons why:

- Canadian producers are world leaders in managing environment, safety, community, and quality of life impacts.
- The world doesn't need Canadian energy resources – they just need energy resources. They are willing to get it anywhere, but the impact to the world's social, economic and environmental systems are substantially higher when it is not Canada producing the energy.
- Time is of the essence. There are 38 applications in US alone, and an estimation that the world only needs 20 LNG terminals. Speed to market is important, and spending more time deliberating is not adding value to any of the key metrics for which we are determining the outcome.
- These projects are supporting:
 - Hundreds of thousands of jobs, which provide the distinctly attractive Canadian lifestyle
 - Billions in payments to local, provincial and federal taxes, not to mention communities and secondary markets in the economy
- Energy industry provides the highest taxation of any industry, and is responsible for our incredible Canadian quality of life

Please, let's stop being apologetic that we have an industry. We need the triple bottom line – socio-economic, environmental, and economic. But you certainly need all three pieces to get any of the three outcomes.

Respectfully,
SIL INDUSTRIAL MINERALS
