

Joint Permitting / Regulatory Coordination Plan

GCT DELTAPORT EXPANSION – BERTH FOUR PROJECT (DP4)

May 31, 2022

FINAL VERSION

Canada 

1. Introduction

1.1 Project Background

GCT Canada Limited Partnership (the proponent) is proposing to expand its existing GCT Deltaport Container Terminal, a container storage and handling facility located in Delta, British Columbia. The GCT Deltaport Expansion – Berth Four Project (the project) would add a fourth berth on the east side of the Roberts Bank Causeway, and include an expansion of the intermodal rail yard along the causeway (Roberts Bank Way) and dredging to provide safe access for ships. The additional land-based container storage and handling facilities would provide an additional two million 20-foot-long storage containers per year at the existing terminal. For additional information refer to the [Detailed Project Description](#).

On October 28, 2021, the Impact Assessment Agency of Canada (the Agency) determined that an impact assessment is required for the project, pursuant to Canada's *Impact Assessment Act* (IAA). Likewise, on the same date, the British Columbia Environmental Assessment Office (EAO) provided a notice of decision under Subsection 18(1) of the *Environmental Assessment Act* (2018) (the B.C. Act) that the project will proceed to an environmental assessment.

On November 3, 2021, the federal Minister of Environment and Climate Change referred the assessment to an independent review panel. The EAO intends to principally rely on the federal review panel's impact assessment to meet the provincial requirements for an environmental assessment. Each government retains the power to make their own decisions regarding the project.

For more information on the assessment of the project or to view the information and comments received, visit the Canadian Impact Assessment Registry (the Public Registry) at [GCT Deltaport Expansion - Berth Four Project - Canada.ca \(iaac-aeic.gc.ca\)](https://www.iaac-aeic.gc.ca) or the EAO Project Information Centre (EPIC) at [EPIC \(gov.bc.ca\)](https://epic.gov.bc.ca).

1.2 Purpose of the plan

This Joint Permitting / Regulatory Coordination Plan (the plan) was developed jointly by the Agency and EAO in support of the coordinated assessment process. The plan has been developed to incorporate the federal IAA requirements for a permitting plan and the EAO's Process Planning Policy requirement for a provincial regulatory coordination plan.

The purpose of the plan is to outline the key federal and provincial regulatory instruments, including permits, licences and authorizations that may be required for the proposed project (see Section 2, Tables 1 and 2). These regulatory instruments may be required should (1) the federal Minister of the Environment and Climate Change issue a decision statement to the proponent with enforceable conditions to allow the project to proceed, and (2) should the provincial Minister of Environment and Climate Change Strategy and the responsible Minister issue an environmental assessment certificate

(EAC), allowing the project to proceed. The plan does not create any new legal requirements. Applications for regulatory instruments may be made during the assessment, but an EAC and federal decision statement allowing the project to proceed must first be obtained before any subsequent permits or authorizations can be issued.

Municipal and/or Indigenous government permits and approvals may also be required for the project but are not discussed in this plan.

The list of regulatory instruments may not be exhaustive and may be subject to change. The Agency and the EAO may revise the plan during the impact assessment process in response to new information or advice from the proponent, regulators, Indigenous nations, the public, jurisdictions or other participants in the process, and in order to accommodate any changes with respect to the project that may occur during the assessment.

The EAO maintains an issues tracking table through the assessment in collaboration with other provincial agencies and Technical Advisory Committee members. The purpose of this table is to provide information regarding how issues will be and/or have been addressed through the assessment and other regulatory requirements or government initiatives specific to the issues raised. Please see the EAO's Regulatory Coordination Issues Tracking Table for the project on [EPIC](#).

Any revisions to the plan will be made publicly available on the [Public Registry](#) and [EPIC](#). The Regulatory Coordination Issues Tracking Table and any updates to the table will be posted on EPIC.

2. Required Regulatory Instruments Identification and Justification

Information about federal and provincial regulatory instruments that may be required should the project be approved to proceed can be found in Tables 1 and 2 below, respectively. In some cases, Tables 1 and 2 may include links to relevant federal and provincial guidance providing supporting details.

Tables 1 and 2 include the following information:

- the name of the primary permit, licence and authorization (regulatory instrument) and its purpose;
- the agency responsible for the regulatory instrument;
- the proponent's anticipated submission dates of permit applications (if known);
- known Indigenous and public engagement activities associated with the regulatory instruments; and
- contact information of the agency responsible for issuing the regulatory instruments.

Should the project receive a positive decision under the IAA and the B.C. Act, the proponent may proceed to permitting. The proponent estimates that this permitting would occur from late 2022 to mid 2025. For additional information refer to the [Detailed Project Description](#).
