

Notice of Determination

August 15, 2022

Ottawa, Ontario

The National Capital Commission (NCC) has determined that the proposed project is not likely to cause significant adverse environmental effects with the application of all recommended mitigation measures.

This determination was based on a consideration of the following factors:

- impacts on the rights of Indigenous peoples
- Indigenous knowledge
- community knowledge
- comments received from the public
- technically and economically feasible mitigation measures
- the components of the environment that are within the legislative authority of Parliament identified in the “Definitions” section of the *Impact Assessment Act*
- the temporary nature of the proposed installation, and the reversibility of the effects

Mitigation measures will be implemented to address potential adverse effects on the following components of the environment:

- migratory birds
- species at risk
- groundwater
- surface water
- soil quality
- air quality
- vegetation
- human health
- gender equality
- archaeological and paleontological resources
- historical resources

After reviewing the comments received and conducting an internal review of effects, the NCC is satisfied that the implementation of the project is not likely to cause significant adverse environmental effects, as long as all mitigation measures are applied. Therefore, the NCC may carry out the project, exercise any power, perform any duty or function, or provide financial assistance to enable the project to be carried out in whole or in part.
