The Proposed Project

Grieg NL Nurseries Ltd. is proposing to install a 150mm high-density polyethylene (HDPE) outfall pipeline from their land-based aquaculture facility, extending 175m into Mortier Bay, NL. Armour stone protection will be placed on approximately 75m of the pipeline from the shoreline and the remaining 100m of pipeline will be secured to concrete ballast blocks placed every 3m on the sea floor. A workboat with a crane will be used for the installation. The total estimated project footprint will be 1058 m² below the high-water mark.
